

FOR IMMEDIATE RELEASE

**FUJI XEROX LINKS MULTIFUNCTION DEVICES WITH GOOGLE DRIVE™
FOR BETTER EFFICIENCY AND USABILITY IN MOBILE WORK ENVIRONMENT****BEGINS OFFERING PRINT & SCAN FOR GOOGLE DRIVE**

TOKYO, January 22, 2013—To seamlessly link digital documents on cloud with paper documents in an aim to support mobile work by enhancing users' work efficiency and reducing costs, Fuji Xerox will launch, on January 31, Print & Scan for Google Drive—a free software that links Fuji Xerox multifunction devices with Google Inc.'s public cloud storage service Google Drive™—, along with the option required*¹ for software operation; the Extensible Customization Kit.

With the Print & Scan for Google Drive, users can operate the control panel on a multifunction device to print documents stored in Google Drive™, directly upload scanned documents or automatically upload incoming faxes. Documents are seamlessly converted and utilized from digital data on a cloud server to paper documents or from paper documents to digital data on a cloud server.

Main Features**Print:**

Users can download and print various forms of documents—DocuWork, PDF, JPEG or Google Docs—stored in Google Drive™ by operating the control panel on a multifunction device. Setting the color mode, using duplex printing and multiple-up printing contribute to cost reduction.

Scan:

Using the scanner on a multifunction device, users can directly upload documents to Google Drive™ without saving them on a PC. With a simple touch of a button, users can select a collection (folder) in the cloud server which to store documents in, for example, to easily sort meeting handouts or hand-written memos.

Automatic upload:

Incoming faxes or scanned documents in a private box of a multifunction device can be automatically uploaded to a pre-designated collection (folder). Users can check*² incoming faxes anytime and anywhere using mobile devices such as smartphones.

*1: Some models require additional options besides the Extensible Customization Kit.

*2: With an Internet browser or application software such as Google Drive™ offered by Google Inc. (as of January 2013).
