

Support Information

ROHM is committed to supporting terahertz wave research and application development and offers a variety of support materials.

Combining the RTD-EVK-G2 Terahertz Wave Device Evaluation Kit with measurement tools such as Analog Discovery 3™ from Digilent (along with a computer and software) allows users to easily evaluate THz wave oscillation and detection. Both the device and evaluation board are compact, making it possible to build a research and development environment even in limited spaces. For more information, please contact a sales representative or visit the contact page on ROHM's website.

Note: Analog Discovery 3™ is a trademark or registered trademark of Digilent, Inc
