

EcoIGBT™ Brand

EcoIGBT™ is ROHM's brand of IGBTs consisting of both devices and modules designed to meet the needs of high-voltage applications in the power device field. ROHM independently develops technologies essential for the evolution of power devices, from wafer fabrication and production processes to packaging and quality control methods. At the same time, we have established an integrated production system throughout the manufacturing process, solidifying our position as a leading power device supplier.

EcoIGBT™ is a trademark or registered trademark of ROHM Co., Ltd.

Support Information

ROHM's official website provides SPICE models that faithfully reproduce the electrical characteristics of the products in simulations, PLECS models for electrical circuit simulation, and other materials needed for circuit design. For more details, please visit [the Field Stop Trench IGBT product page](#).
